

# CoGrammar

#### **Conditional Statements**

## Lecture Objectives

- Define operators and explain their usage in programming.
- Explore Conditional Statements and control flow

3. Demonstrate and apply basic conditional statement and operator usage in your programs.

#### **Software Engineering Lecture Housekeeping**

- The use of disrespectful language is prohibited in the questions, this is a supportive, learning environment for all - please engage accordingly.
   (FBV: Mutual Respect.)
- No question is daft or silly ask them!
- There are Q&A sessions midway and at the end of the session, should you
  wish to ask any follow-up questions. Moderators are going to be
  answering questions as the session progresses as well.
- If you have any questions outside of this lecture, or that are not answered during this lecture, please do submit these for upcoming Open Classes.
   You can submit these questions here: <u>Open Class Questions</u>

#### Software Engineering Lecture Housekeeping cont.

- For all non-academic questions, please submit a query:
   www.hyperiondev.com/support
- Report a safeguarding incident:
   <u>www.hyperiondev.com/safeguardreporting</u>
- We would love your feedback on lectures: Feedback on Lectures

#### **Assessment**

#### **Co**Grammar

Recap on Python and Variables

#### **Booleans**

- ★ Booleans can only be stored as one of two things: True or False.
- ★ Mainly used for conditional checks.
- ★ Booleans should be declared in Python with capitals. Using lowercase for booleans will return an error in Python.

## **Comparison Operators**

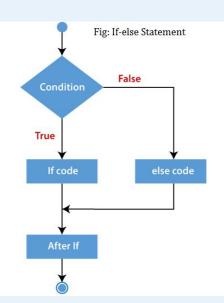

OPERATOR	OPERATION	EXAMPLE
== Equal to	True if <b>x</b> has the same value as <b>y</b>	x == y # True
!= Not equal to	True if <b>x</b> does <b>NOT</b> have the same value as <b>y</b>	x != y # False
>= greater than or equal to	True if <b>x</b> is greater than or equal to <b>y</b>	x >= y # True
<= Less than or equal to	True if <b>x</b> is less than or equal to <b>y</b>	x <= y # True

## **Logical Operators**

OPERATOR	OPERATION	EXAMPLE
and	True if both <b>x AND y</b> are true (logical conjunction)	If x and y: print(z)
or	True if either <b>x OR y</b> are true ( <b>logical disjunction</b> )	If x or y print(z)
not	True if the <b>opposite</b> of <b>x</b> is true ( <b>logical negation</b> )	If not x print(y)

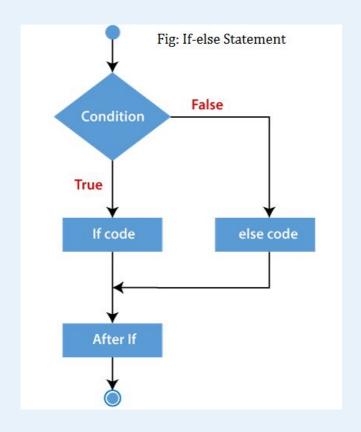

#### **Control Structures**

- ★ Control structures are code that will analyse variables and then choose a direction(control flow) to follow based on the input provided.
- ★ Think of it as a form of branching: depending on the provided input, your program will have one of x branches to follow.
- ★ e.g. "If I finish my work early, I will go to bed. Else, I will have to work through the night".

#### **Elif Statements**

- ★ What if there is a situation where we could have multiple statements that are True?
- ★ This is where elif comes into play: Else if → elif
- ★ Elif statements are mainly used to handle the case when multiple True statements are present.
- ★ Note that you can have multiple elif statements in an if-else block.

## Question:

How are comparison operators different from logical operators?

## **Few Things To Note**

- ★ There is no limit to the number of elif statements one could have in an if-else block.
- ★ Only one final else statement is allowed.
- ★ Each condition is checked in order.
- ★ If one condition is True, that branch executes, and the statement ends.
- ★ Even if there are multiple True conditions, only the first True branch will execute.

### and Operator

- \* Returns as True when both conditions specified are met.
- **★** Example:

```
if grade > 50 and grade > 75:
    print("conjunction")
    print("Both Conditions have been met :)")
```

### or Operator

- \* Returns True if either of the specified conditions are met.
- **★** Example:

```
elif grade > 50 or grade > 75:
    print("disjunction")
    print("At least one of these conditions have been met.")
```

### not Operator

- ★ Changes the condition from True to False and vice versa.
- **★** Example:

```
if not grade > 50:
    print("Negation")
```

## Challenge:

## Poll:

**Assessment** 

#### **Wrapping Up**

#### **Control Structures**

Programming Constructs that manage the flow of execution in a programme

#### If-else statements

Allows the execution of a block of code based on specified condition

## Progression Criteria

#### ✓ Criterion 1: Initial Requirements

Complete 15 hours of Guided Learning Hours and the first four tasks within two weeks.

#### ✓ Criterion 2: Mid-Course Progress

- Software Engineering: Finish 14 tasks by week 8.
- Data Science: Finish 13 tasks by week 8.

#### Criterion 3: Post-Course Progress

- Complete all mandatory tasks by 24th March 2024.
- Record an Invitation to Interview within 4 weeks of course completion, or by 30th March 2024.
- Achieve 112 GLH by 24th March 2024.

#### Criterion 4: Employability

Record a Final Job Outcome within 12 weeks of graduation, or by 23rd September 2024.

#### CoGrammar

Questions around String and Variables
